**3 MIN TRAINING FOR
USERS**

REAL-TIME STATISTICS

EASY TO MANAGE

Avoid queues at the registration desk, track your attendees in real-time and reduce the potential for human error in your registration system. EasyBADGE has your name written all over it!

This powerful and easy-to-use registration system allows you to print namebadges on-site instantly.

The system is very simple. Before the event, attendees receive a personal barcode via confirmation email. The list of confirmed attendees is entered into an easyBADGE database and when guests arrive onsite, their personal barcode is scanned by a hostess (either on paper or on screen) and the badge of the guest is printed instantly.

The badge can be PVC or paper, on one page or more. NFC compliant badges also exist.

Live tracking of your attendees is possible via the intuitive Dashboard system where you can look up a specific guest or review attendance statistics. This is an offline system and does not require an internet connection.

Add-ons are available for collecting manual signatures on touch-screen technology and for sending targeted SMS notifications to guests
